Wow. The description about greatly improved mobility is very accurate. This thing can MOVE. It's highly useful for running around missions that can beat themselves and just grabbing weapon and armor drops. Not that great for actual combat though, due to it's short weapon range. Unless you like to kite around large groups of ground bugs, spraying them in the face the whole time.. Use on Crimson for MAXIMUM SUMMERTIME. All the DLC tanks takes some time to unlock in multiplayer at level 8 which becomes available at mission 25 on normal mode, they are also reasonably expensive with a base price of \$3.50 SGD considering they won't last very long in terms of performance. I would recommend it if you like driving/collecting tanks with

cute anime style prints on it as I do. I would not recommend it if you are looking for a overpowered DLC to carry your game. I have 4 out of 5 of the Ita-tank DLCs (the DCC Zero performs identically to the GoGo) and after hours of driving them, this is where the Natsuiro Highschool Markings sits : + Great Prints + Has a watergun to subdue rioting giant insects + Deceptively good damage per second + Comes with so much ammunition that you usually switch vehicles before you run dry (haha geddit?) + Tank is ridiculously agile and has the same HP as the other DLC tanks + Has utility as a command tank to drive around and call artillery from because of its mobility + Is a unique novelty + You are actually shooting water so you won't hurt yourself + Bonus points if you're familiar with the Natsuiro HS game, you pervert +/- You look very silly - Gun feels like a toy and the tank drives like one - Turret turns way too quickly making it quite difficult to keep track of your target - Yucky Yellow base paint - Limited range - Gun has to be kept on target to deal damage - Gun does not feel like its doing damage - You can only see the girls when you're in front of the tank or standing on top of it This is easily the most unique out of all the DLC tanks. The gun itself makes it pretty clear that its not really a serious vehicle and the handling reinforces that. However the gun is surprisingly viable, dealing more damage than expected as long as you keep it on target. It is a shame that it comes in horrendous shade of yellow, it would have been perfect if it came in a pleasant color and with a turret slowed down slightly to manageable levels. All in all, this is the one you want to get if you're only planning to buy 1 DLC tank. tl;dr Like cute anime tanks and willing to spend \$\$\$? Go for it. Has the most novelty factor.
